Headline:
2 new features to expedite your next cyber insurance application

Body:
Hi [FirstName],

The last thing you want is to spend precious time filling out every line of cyber insurance applications for your clients. For many of your clients, the same answers apply, so to save you time we're introducing two new features to streamline and speed up the application process:

- View all client applications in one place: View the status of each application and use predefined filters to sort through clients. Viewing and sorting in one place also helps you improve a client's cyber posture.
- Import previously used answers: Many MSP clients have the same pain points and needs. Importing previous information removes the monotony of filling each box and improves overall application accuracy.

[button option 1] Save time with every application

Watch this 1-minute walkthrough video of how these features work to see how easy it really is.
